Marcus Paula — what I did, what I practised, and the proof

IT Operations Engineer · TikTok, Dublin (EMEA) · March 2023 – September 2026 | Information Technology Engineer · Hylas · January 2022 – February 2023 | github.com/marcuspaula-seceng

■ Real work (employer) ■ My lab (synthetic data, labelled as lab) ■ Public proof on GitHub (screenshots, tests, build log)

AREA	REAL WORK AT TIKTOK	WHAT I BUILT AND TESTED IN MY LAB	PROOF (CLICK)
Service desk (Jira)	Jira every day as an **agent** (not admin): priorities, L2/L3 escalations, SLAs. Queues by country, each owned by a team, tickets pre-assigned to engineers.	Built the **admin** side in Jira Service Management Cloud: request types, SLAs on Dublin hours, country queues with auto pre-assign, approvals, joiner/leaver automation, knowledge base, SLA report and dashboard.	Project 07 – JSM lab Build log, 15 steps 38 screenshots
Incidents and change (ITSM)	On-site troubleshooting and escalation with evidence. Firewall and VPN were owned by the network team.	Major incident with a timeline, problem record with root cause, and a normal change (firewall firmware) through peer review and CAB approval.	Step 12 – ITSM Agent runbook (first 60 min)
Identity and Microsoft 365	Entra ID accounts (create, disable), password and MFA resets, licences, security groups, distribution lists, shared mailboxes — joiners and leavers by hand.	Automated joiner / mover / leaver with Microsoft Graph PowerShell: dry run by default, leaver blocked and sessions revoked first, failures become a ticket. 31 automated tests.	Project 09 – JML automation Project 08 – runbook AD automation lab
Mac and Windows devices	Macs in Apple Business Manager + Puppet. Windows with BitLocker / MBAM. Lock, wipe and device returns. Laptop preparation cut from 60 to 15 minutes.	Readiness script and checklists; tool mapping to Intune and Jamf (design — new to me).	Project 01 – imaging Project 08 – devices
Assets (ITAM)	Helped design a scan-based asset audit: 5,000+ assets, 99% visibility. Asset return process used in three sites.	Jira Assets (CMDB): laptops linked to requests, In repair / back In use automatically, scan audit with missing-laptop ticket, Python reconcile tool with tests.	Project 02 – audit Project 04 – returns Audit procedure + tool
Office and meeting rooms	19 meeting rooms checked on Lark and Zoom; equipment logistics with couriers and vendors.	Room readiness report tool with synthetic data.	Project 05 – rooms

How to read it: left = what I did in my job; middle = what I rebuilt myself to learn the admin side; right = links anyone can open. Labs use synthetic data and are not production claims. No employer data is published. Jira courses in progress (~50 hours, hands-on): learning path.

What I have done, what I practised in a lab, and what is new to me

Clear on purpose: **Done in real work** · **Practised in my lab** · **New to me — I would learn it first in a test environment**

Skill	Level	Detail	Proof
Jira as agent (tickets, SLAs, escalations)	**Done in real work**	Every day at TikTok; country queues with pre-assignment.	Scenario map
Jira Service Management administration	**Practised in my lab**	Request types, SLAs, queues, automation, approvals, Assets, ITSM, reports, schemes.	Build log
Entra ID and Microsoft 365 user lifecycle	**Done in real work**	Accounts, MFA, licences, groups, mailboxes.	Project 08
Joiner / leaver automation (Graph PowerShell)	**Practised in my lab**	Tested with mocks; needs a tenant to run for real.	Project 09
Apple Business Manager + Puppet; BitLocker / MBAM	**Done in real work**	Mac and Windows device lifecycle, lock, wipe, return.	Project 08
Asset audit and returns	**Done in real work**	5,000+ assets, 99% visibility; returns in three sites.	Project 02
Intune, Mosyle, Jamf administration	**New to me**	Same lifecycle as ABM + Puppet / BitLocker; mapping documented.	Tool mapping
Microsoft Defender, FortiGate, QNAP administration	**New to me**	Firewall/VPN owned by the network team at TikTok. Firewall change practised as a CAB change in the lab.	Change ITSM-4
SSO / SCIM from Entra ID to Atlassian	**New to me**	Next step, in a free test tenant.	Learning path

All lab work uses synthetic data and is labelled as a lab. Employer work is described at capability level, with no confidential data. Every link opens a public page with screenshots, scripts or test results.
